FOREST AREA IN MISSOURI COUNTIES

In 1959, Missouri's forests occupied 15.3 million acres or 34.5 percent of the State's total land area. All but about 320,000 acres of this forest land is capable of producing commercial timber.

Three Missouri counties--Shannon, Texas, and Reynolds--contain more than 400,000 acres of forest land each. Shannon with 517,200 forest acres leads all other counties. Only five counties have less than 25,000 acres of woodland each. Worth County in the northwestern corner of the State has the least forest cover, 16,200 acres.

Forests occupy more than 75 percent of the total land area in each of six Missouri counties, all located in the heavily forested Eastern Ozarks Region. Ten counties are less than 10 percent forested. The forest area in each county ranges from 6.7 percent in Pemiscot to 85.4 percent in Carter.

The total forest acreage of the State as a whole has increased only slightly since 1947 when the first comprehensive forest inventory of Missouri was conducted. However, significant changes have occurred in several counties and in certain regions of the State. Forest acreage has increased in 64 counties and decreased in 49. Forest area has increased in the sparsely forested Northern Prairie Region where many acres of idle cropland and pastureland have reverted to forest. On the other hand, forest area has decreased sharply because of extensive land clearing for agriculture in the alluvial flatlands of southeastern Missouri.

1/ Forest land includes areas at least 10 percent stocked with species of forest trees that are capable of producing timber or other wood products, as well as land from which the trees have been removed to less than 10 percent stocking, as long as this land has not been developed for other uses. The minimum size of tract recognized as forest is 1 acre; the minimum width for a wooded strip is 120 feet.

2/ Commercial forest land includes forest land that is producing, or is physically capable of producing, usable crops of industrial wood (usually saw logs and pulpwood but excluding fuelwood). Commercial forest land is available or prospectively available, and not withdrawn from timber utilization.

3/ Noncommercial forest land includes forest land that qualifies as commercial forest but is withdrawn from timber utilization through statute, ordinance, or administrative order such as state parks or forest land that is incapable of yielding a stand averaging at least one saw log per tree.

This forest area information resulted from a comprehensive resurvey of Missouri's forest resources which was completed through the combined efforts of the Forest Service of the U.S. Department of Agriculture, the School of Forestry of the University of Missouri, and the Missouri Conservation Commission. The T. J. Moss Tie Company also assisted with the survey in certain areas. The University of Missouri Agricultural Experiment Station is publishing regional statistical reports covering this resurvey. The Central States Forest Experiment Station will publish an analytical report for the State as a whole.
